                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method (M1) of determining an individual's predisposition to epilepsy and/or development of epilepsy, as well as predicting the individual's response to medication. The method CC comprises determining the genotype of at least one gene selected from CC SCNIA, SCNZA or SCNJA, or a DNA variant, equivalent, or mutation which CC channel genes located on chromosome 2. The idiopathic generalised occidentally localised on chromosome 273. Compounds identified as modulators of the biological activity of SCNJA, SCNZA or SCNJA proteins or genes, are useful for treating epilepsy (CC or other neurological disorders. They have anticonvulsant and CC represent SCNJA, SCNZA, and SCNJA, and SCNJA conditions of the biological activity of CC or other neurological disorders. They have anticonvulsant and CC represent SCNJA, SCNZA, and SCNJA, cDNAS, gene fragments, PCR primers, CC oligonucleotides and proteins given in the exemplification of the present convention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method (M1) of determining an individual's predisposition to epilepsy and/or development of epilepsy, as well as predicting the individual's response to medication. The method comprises determining the genotype of at least one gene selected from SCN1A, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium. SCN1a, SCN2A and SCN3A are all sodium channel genes located on chromosome 2. The idiopathic generalised epilepsy (IGE) gene is more specifically localised on chromosome 2q23-q31. Compounds identified as modulators of the biological activity of SCN1A, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvulsant and neuroprotective activities. AAH55763 to AAH56164 and AAB99674 to AAB99679 represent SCN1A, SCN2A, and SCN3A CDN3A, Suse fragments, PCR primers,
The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide, sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a CC compound for identifying a compound or small molecule that regulates the CC extivity in an animal of one or more of the polypeptides given in the CC excivity in an animal of one or more of the polypeptides given in the CC excivity in an animal of one or more of the polypeptides given in the CC expression, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more completed or their antibodies. The polypucleotide or the compound that cC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Cnung), chronic constriction constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed composition in the polyphyliched for securiors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The present sequence is novel human protein (NHP), ion channel protein. NHP share structural similarity with mammallian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the
                                                                                                                                                                                                                                                                                                                                                                 WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of human tumour-associated antigenic target (TAT) polynucleotide and polypeptide sequences. Also disclosed is an antibody that binds to a TAT polypeptide. The antibody is a monoclonal antibody, an antibody fragment, a chimeric antibody or a humanised antibody. It is conjugated to a growth inhibitory agent. It is produced in bacteria or in CHO cells and induces death of a cell to which it binds. The antibody is useful for preparing a composition for diagnosing or treating tumours and cancer. The present sequence represents a human TAT polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Turner CA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16-AUG-2000; 2000US-0225989P

CC sites, introns that can be used in diagnostics and pharmacogenomics. NHP
CC nucleotide sequences are useful for drug screening effective in the
CC treatment of symptomatic or phenotypic manifestations of perturbing the
CC normal function of NHP in the body, and nucleotide constructs encoding
CC MHP products are useful to genetically engineer host cells to express NHP
CC products in vivo. These genetically engineered cells function as
CC bioreactors in the body delivering a continuous supply of a NHP, a NHP
CC peptide, or a NHP fusion protein to the body. Nucleotide construct
CC encoding NHP products are also useful in gene therapy for modulating NHP
CC expression and to produce genetically engineered host cells to express
CC MHP products in vivo. NHP nucleotide sequences may also be used as part
CC of ribozyme and/or triple helix sequences that are useful for NHP gene
CC regulation. The NHP polypeptides are useful for generating antibodies, as
CC reagents in diagnostic assays, for identifying other cellular gene
CC compounds that are useful in the treatment of mental, biological or

CC compounds that are useful in the treatment of mental, biological or
                        Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for drug screening, diagnosis and in gene therapy of biological disorders.
                                                                                                                                                                                                                                                                                                                                                                                             Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      medical disorder.

```
CC in amplification assays to detect mutations within the exons, splice CC sites, introns that can be used in diagnostics and pharmacogenomics. NHP cc nucleotide sequences are useful for drug screening effective in the CC treatment of symptomatic or phenotypic manifestations of perturbing the CC normal function of NHP in the body, and nucleotide constructs encoding CC NHP products are useful to genetically engineer host cells to express NHP CC products in vivo. These genetically engineered cells function as CC bioreactors in the body delivering a continuous supply of a NHP, a NHP CC peptide, or a NHP fusion protein to the body. Nucleotide construct CC encoding NHP products are also useful in gene therapy for modulating NHP CC expression and to produce genetically engineered host cells to express CC NHP products in vivo. NHP nucleotide sequences may also be used as part CC of ribozyme and/or triple helix sequences that are useful for NHP gene CC reagents in diagnostic assays, for identifying other cellular gene CC compounds that are useful in the treatment of mental, biological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

NHP share structural similarity with mammallian sodium channel proteins particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridiaation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NHP gene can be used to design primers for use
Recombinantly expressed sodium channel type 1 alpha subunit, screening for modulators, for treating e.g. epilepsy.

(I), optionally incorporated into a cell, is used to screen for specific modulators, potentially useful as anticonvulsant, antiepileptic, neuroprotective, analgesic and/or anesthetic agents, e.g. for treating severe myoclonic epilepsy of infancy, stroke, cardiac arrest, hyperkalemic paralysis, motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human SCNIA splice variant 84P:SCNIADELp654-681
particularly voltage-gated sodium channel proteins. NHP oligonucleotides are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adiacomminations
                                                                                                                                                                                                                                                                   Novel polynucleotides encoding human sodium channel proteins, particularly voltage-gated sodium channel proteins useful for druscreening, diagnosis and in gene therapy of biological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1981 AA;
                                                                                                               The present sequence is novel human protein (NHP), ion NHP share structural similarity with mammalian sodium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC intron/exon boundaries of NHP gene can be used to design primers for use CC in amplification assays to detect mutations within the exons, splice Sites, introns that can be used in diagnostics and pharmacogenomics. NHP CC treatment of symptomatic or phenotypic manifestations of perturbing the CC normal function of NHP in the body, and nucleotide constructs encoding CC products are useful to genetically engineer host cells to express NHP CC products in vivo. These genetically engineered cells function as CC peptide, or a NHP fusion protein to the body. Nucleotide construct ce encoding NHP products are also useful in gene therapy for modulating NHP products are also useful in gene therapy for modulating NHP CC expression and to produce genetically engineered host cells to express NHP CC expression and to produce genetically engineered host cells to express CC of ribozyme and/or triple helix sequences that are useful for NHP gene CC resgents in diagnostic assays, for identifying other cellular gene CC products related to NHP and as reagents in assays for screening for CC compounds that are useful in the treatment of mental, biological or XX medical disorders and diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                           The present invention describes human sodium channels SCNIA and SCNIA. The present sequence represents the human sodium channel SCNIA. SCNIA and SCNIA have been located to the human chromosome 2 long arm, positions 2q24 and 2q24-31 respectively. The sodium channel proteins are useful in studying the physiological mechanism in which excitant cells participate and cause human diseases, and in developing remedies for e.g. familial hypercalcaemic periodic paralysis of extremities and motor endplate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  motor endplate diseases, hypertension, congestive heart failure and muscular dystrophy also to treat cancer (SCNIA is expressed in prostatic and metastatic cancer cell lines). These activities can also be provided by gene therapy vectors that express (I) or the modulators. The modulators, also antibodies directed against (I), are used to detect sodium channel polypeptides. The present sequence represents a human SCNIA splice variant 33P.SCNIADELp671-681 encoding cDNA

SCNIA and SCNIA have been located to the human chromosome 2 long arm, positions 2024 and 2024-31 respectively. The sodium channel proteins are useful in studying the physiological mechanism in which excitant cells participate and cause human diseases, and in developing remedies for e.g. familial

The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, occur pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present

The method comprises determining the genotype of at least one gene selected from SCNIA, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which channel genes located on chromosome 2. The idiopathic generalised epilepsy (IGE) gene is more specifically localised on chromosome 223-231. Compounds identified as modulators of the biological activity of SCNIA, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvulsant and neuroprotective activities. AAH55763 to AAH56164 and AAB99679 to cligonucleotides and proteins given in the exemplification of the present convention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
Determining a predisposition to epilepsy and/or development of epilepsy comprises determining the genotype of SCNIA, SCN2A and/or SCN3A, or a Divariant, equivalent, or mutation which shows a linkage disequilibrium.

                                                                        This invention relates to a human polynucleotide which is complementary to an mRNA transcribed from a "generalized epilepsy with febrile seizury plus" (GEFS+)-related gene. The gene is useful for diagnosing GEFS+. The present sequence represents the human GEFS+ protein sequence with SCN2A
                                                                                                                                                                                                                                          Claim 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (MI) of determining an individual's predisposition to epilepsy and/or development of epilepsy, as well as predicting the individual's response to medication. The method comprises determining the genotype of at least one gene selected from SCNIA, SCN2A or SCN3A, or a DNA variant, equivalent, or mutation which shows a linkage disequilibrium. SCNIA, SCN2A and SCN3A are all sodium epilepsy (IGE) gene is more specifically localised on chromosome 2023-031. Compounds identified as modulators of the biological activity of SCN1A, SCN2A or SCN3A proteins or genes, are useful for treating epilepsy or other neurological disorders. They have anticonvulsant and neuroprotective activities. AAH55763 to AAH56164 and AAB99674 to AAB99679 represent SCN1A, SCN2A, and SCN3A CNNAs, gene fragments, DCR primers, anxention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human GEFS+ protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABB83627;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
predisposed to a disorder associated with ion channel dysfunction. The comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a cDNA cerived from the subject has any of 134 nucleotide sequences. The method of the invention has nootropic, neuroprotective, inotropic, antipyretic, contiarrhythmic, antimigraine, antidepressant, antiparkinsonian, convergebic, tranquiliser, analgesic, nephrotropic, antidabetic, and ophthalmological activity. A polynucleotide of the invention acts as an conclusion channel agonist, or ion channel antagonist. The methods, isolated cucleic acids, polypeptides, antibody, selective agonist, antagonist or conclusion channel, cells and genetically modified non-human and conclusion of an ion channel, cells and genetically modified non-human conclusion. Are useful for the diagnosis and treatment of epilepsy and/or a conclusion periodic paralysis, myotonias, malignant hyperthermia, conclusion, such as hyper- or hypockalemic periodic paralysis, myotonias, malignant hyperthermia, antiety, conclusion, phobic obsessive symptoms, neuropathic pain, inflammatory disease, Parkinson's disease, schizophrenia, hyperthick, anxiety, conclusion, chronic/acute pain, Bartter's syndrome, polycystic kidney disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mulley JC, Ha
The invention relates to a novel method for identifying a subject predisposed to a disorder associated with ion channel dysfunction. The method comprises ascertaining if at least one of the genes encoding ion channel subunits (ICS) has undergone a mutation event so that a CDNA derived from the subject has any of 134 nucleotide sequences. The metho of the invention has mostropic, neuroprotective, inotropic, antipyretic antiarrhythmic, antimigraine, antidepressant, antiparkinsonian, neuroleptic, tranquiliser, analgesic, nephrotropic, antidiabetic, and ophthalmological activity. A polynucleotide of the invention acts as an ion channel agonist, or ion channel antagonist. The methods. isolated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Dent's disease, hyperinsulinaemic hypoglycaemia of infancy, cystic fibrosis, congenital stationary night blindness and total colour blindness. The present sequence represents a mutant protein of the invention. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mutein; mutant; ion channel; ion channel subunit; ICS; nootropic; neuroprotective; inotropic; antipyretic; antiarrhythmic; antimigraine; antidepressant; antiparkinsonian; neuroleptic; tranquiliser; analgesic; nephrotropic; antidiabetic; ophthalmological; epilepsy;

C;Comment: This membrane glycoprotein mediates the voltage-dependent sodium-ion permeabill so the membrane, the protein forms a sodium-selective channel through which sodium ions ni C;Comment: This sequence contains four highly homologous internal repeats (excluding resillard repeat has a similar overall structure containing six subregions located in identic has a net positive charge (S4), and one is neutral (S2).
C;Comment: The four repeating units are thought to be oriented pseudosymmetrically across e. The presence of four homologous structures within this molecule is consistent with the C;Comment: Available data suggest that activation and inactivation gates are located near 955 might, in conjunction with the positively charged residues of S4, act as a voltage se C;Superfamily; sodium channel protein

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score

permeability of excitable membranes. Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na+ ions may pass in accordance with their electrochemical and innervated skeletal muscle.

In SUBUNIT: Muscle sodium channel may be present in both denervated and innervated skeletal muscle.

Is SUBUNIT: Muscle sodium channels contain an alpha subunit and a syntrophin SNTA1, SNTB1 and SNTB2 (By similarity).

SUBCELLULAR LOCATION: Integral membrane protein.

DOMAIN: The sequence contains 4 internal repeats, each with 5 segments (S1, S2,S3,S5,S6) and one positively charged characterized by a series of positively charged amino acids at every third position.

PISEASE: Defects in SCNAA are the cause of paramyotonia congenita sodium channel disease characterized by myotonia, increased by exposure to cold, intermittent flaccid paresis, not necessarily
                                                                                                                                                                                                                                                     "Sodium channel gene mutations in hypokalemic uncommon cause in the UK.", Neurology 57:1323-1325(2001).

-I- FUNCTION: This protein mediates the voltage conformation of excitable membrance "--

Assuming opened or closed conformations in response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na+ ions may pass in accordance with their electrochemical gradient. This sodium channel may be present in both denervated and innervated skeletal muscle.

SUBUNIT: Muscle sodium channels contain an alpha subunit and a smaller beta subunit. Interacts with the PDZ domain of the syntrophin SNTA1, SNTB1 and SNTB2 (By similarity).

SUBCELIULAR LOCATION: Integral membrane protein.

Hodwain: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1, S2, S3, S5, S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-APR-1990 (Rel. 14, Last sequence update)
05-JUL-2004 (Rel. 44, Last annotation update)
Sodium channel protein type IV alpha subunit (Voltage-channel alpha subunit Nav1.4) (Sodium channel protein, alpha-subunit) (Mu-1).
                                                                                                                                                                                EMBL; M26643; AAA41682.1;

                                       of excitable membranes. Assuming opened or closed conformations in conference to the voltage difference across the membrane, the procean forms a sodium-selective channel through which Na(+) ions converted forms a sodium-selective channel through which Na(+) ions converted forms a sodium-selective channel through which Na(+) ions consists of a large polypeptide and 2-cisupunitar The sodium channel consists of a large polypeptide.

I smaller ones, This sequence represents a large polypeptide.

I smaller ones, This sequence represents a large polypeptide.

I smaller ones, This sequence represents a large polypeptide.

I subcellular Location: Integral membrane protein.

I hydrophobic segments (S1,S2,S3,S5) and one positively charged characterized by a series of positively charged amino acids at every third position.

I subcarity: Belongs to the sodium channel family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş

-i- DOMAIN: The sequence contains 4 internal repeats, each with 5 hydrophobic segments (S1,82,S3,S5,S6) and one positively charged segment (S4). Segments S4 are probably the voltage-sensors and are characterized by a series of positively charged amino acids at every third position.
-i- SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                              This SWISS-PROT entry is copyright. Assuming opened or closed conformations response to the voltage difference across the membrane, the protein forms a sodium-selective channel through which Na(+) ion may pass in accordance with their electrochemical gradient. SUBUNIT: The sodium channel consists of a large polypeptide and SUBCELLULAR LOCATION: Integral membrane protein.
